

# Data Sheet for Custom Foils with Logo Print

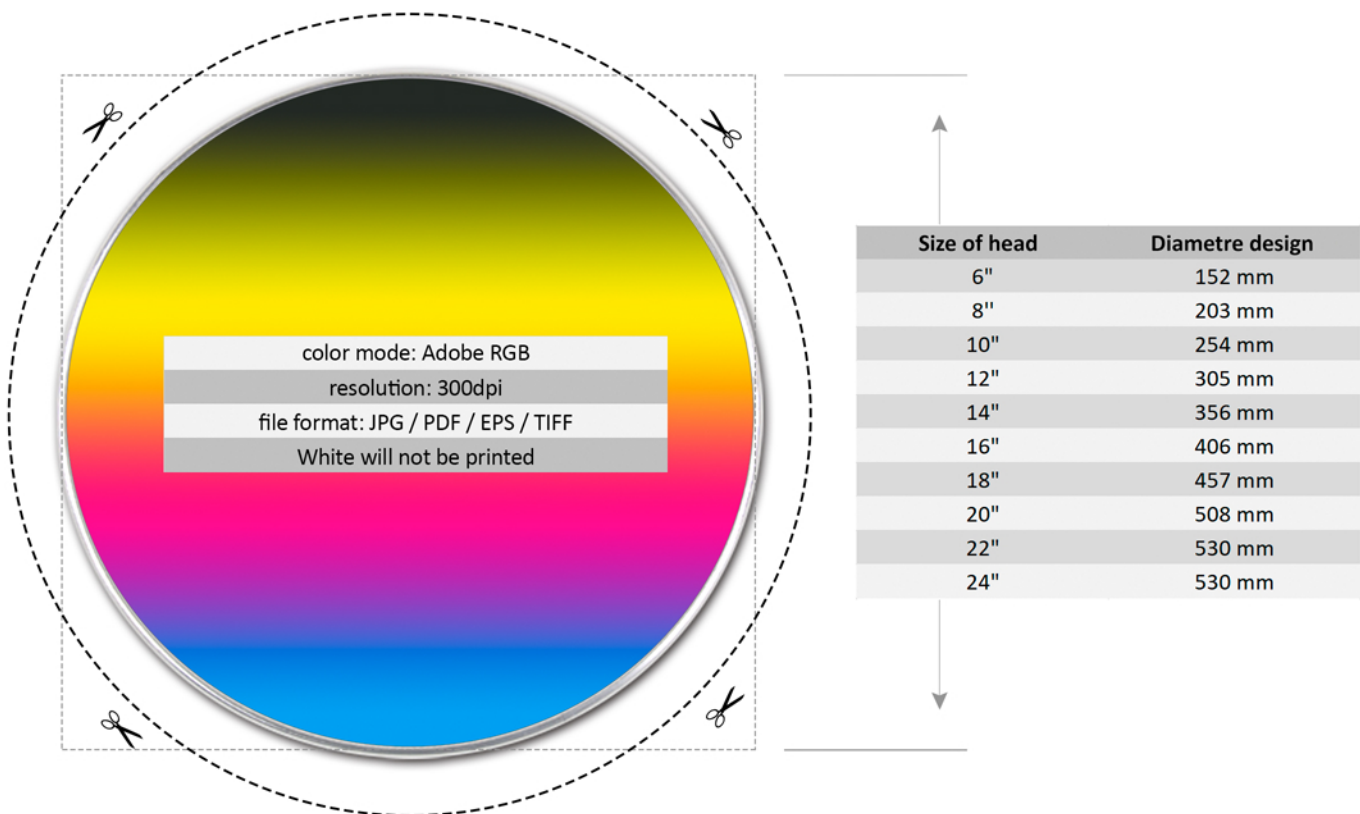

## Image size, resolution and file format:

Please create 1 separate file (image size = diameter of motif) for each foil size you want to order and use the specifications as following. The resolution should be 300 dpi if possible, but at least 200 dpi.

The foil can be printed up to the edge.

File format: jpg or pdf (maximum quality), eps, tiff

Submitted files sent to us with other than the original size or the indicated resolution, **cannot be transferred to further print processing.**

## Colours (for professional print preparation):

Please use the following information to provide us with ideal data material for best print results and color reproduction:

- color mode: Adobe RGB
- White cannot be printed. White areas in your design will remain in the unprinted natural color of the head.
- Use a calibrated monitor!
- The transparent foil has an influence on the colour intensity. We cannot guarantee 100% exact colour reproduction. We therefore always recommend ordering a logo foil as a test print before ordering larger amounts of prints.

Files which don't correspond with our recommendations for color adjustment can in fact be printed, however deviations of color reproduction may appear.
